SUMMARY:

Aspiring Computer Engineer with good foundation in Computer Engineering principles. Proficient in Software Development domain and want to utilize my skillset for mutual success with leading organization, upholding integrity, care, excellence, courage and resilience. Ability to adapt to evolving technologies and methodologies. Adept at collaborating with seniors, cross-functional teams, and clients to achieve project objectives.

CAREER OBJECTIVE:

Lead by innovation and seek sustainable solutions that advance modern living and net-zero future. Learn/relearn & share knowledge to empower others with valuable skills and right mindset to nurture chain reaction of growth.

TECHNICAL SKILLS:

- Programming Languages: C, C++, JAVA, Basic Python
- Web Technologies: HTML, CSS, JavaScript
- Tools: Microsoft Word, Excel and PowerPoint

EDUCATION:

1. Pursuing B.E. in Computer Engineering from Sipna College of Engineering, Amravati.
2. Completed HSC in 2022 from Maharshi Public School (CBSE) with 69.8%
3. Completed SSC in 2020 from Vishwabharati Public School (CBSE) 75.7%

PROJECT EXECUTED:

KEYSTONE – Field Service Management Platform | React.js, JavaScript, Bootstrap, Vite, Java Spring Boot, MySQL

Developed a responsive Field Service Management Platform using React.js, JavaScript, Bootstrap, Vite, Java Spring Boot, and MySQL. Designed and implemented the frontend with reusable components and a user-friendly interface, and integrated it with backend REST APIs for seamless data communication and application functionality. Collaborated with team members on backend development, database connectivity, API integration, and application testing. Deployed the frontend on Vercel to provide a live, accessible demonstration of the application.

Live Demo: <https://keystone-frontend-w7dt.vercel.app/>

GitHub: <https://github.com/irajathe03-ij/KEYSTONE-frontend>

Smart Project Assessment and Recommendation Dashboard Using AI

Executing the development of web platform which gives AI based suggestions, feature recommendation, and evaluates the project outcomes based on the problem statement and desired solution, to showcase suggestions, recommendation & the deviation from desired outcome on an interactive dashboard. This project tend to play crucial role in evaluating, tracking and helping in decision making to create fine tune models for delivering desired outcome, creating a roadmap or the way forward to deliver the best possible outcome within the bounded scope and budget.

Smart Prompt-crafter

Prompt generator website which recommends sample prompts based on the domain of interest (for e.g. Marketing, Sales, Report writing, code debugging, brainstorm ideas, etc.). This project was meant to suggest the ideal the prompt sample consisting of role, goal, intention, format, desired outcome, notes, etc. and a feedback mechanism (i.e. why this prompt works) based on prompt engineering principles to achieve desired error free outcome.

Assignment Management System – Basic Submission Tracking | React.js, JavaScript, Vite, Node.js, Express.js, MySQL

Developed a web-based Assignment Management System that enables professors to create, manage, and track assignments while allowing students to view assignments and submit solutions. Designed and implemented the frontend using React.js, JavaScript, and Vite, with a Node.js and Express.js backend connected to MySQL for data

management. Implemented user authentication, assignment creation and management, student submissions, and automatic submission status tracking based on assignment deadlines, including On Time, Late, and Missing statuses. Integrated REST APIs between the frontend and backend to provide seamless application functionality.

GitHub: <https://github.com/irajathe03-ij/assignment-management-system>

VoiceFlow – AI-Powered Text-to-Speech Web Application | React.js, JavaScript, Vite, Node.js, Express.js, gTTS

Developed a multilingual Text-to-Speech web application that converts user-provided text into natural-sounding speech across multiple languages. Designed and implemented a responsive frontend using React.js, JavaScript, and Vite, with an Express.js backend for text processing and audio generation using gTTS. Integrated frontend and backend REST APIs for language and voice selection, text-to-speech conversion, and audio playback. Implemented support for languages including English, Hindi, Marathi, Gujarati, Spanish, French, and German. Deployed the frontend and backend on Render to provide a live, accessible demonstration of the application.

Live Demo: [Live Demo: https://text-to-speech-frontend-43wq.onrender.com/](https://text-to-speech-frontend-43wq.onrender.com/)

GitHub: <https://github.com/irajathe03-ij/text-to-speech>

Portfolio CMS – Personal Portfolio Management System | React.js, Tailwind CSS, Node.js, Express.js, MySQL

Developing a full-stack Portfolio Content Management System that enables centralized management of portfolio content through a custom administrative interface. Designed the frontend using React.js and Tailwind CSS and developed a Node.js and Express.js backend with MySQL database integration. Implemented backend architecture for managing portfolio sections including About, Projects, Skills, Services, Experience, Blogs, Testimonials, Media, Messages, and Users. Integrated authentication and REST APIs to support secure content management and dynamic portfolio updates.

Employee Management System | Java, OOP, Data Structures

Developed a Java-based Employee Management System to manage employee information and perform common employee-related operations. Implemented object-oriented programming concepts including classes, objects, encapsulation, inheritance, and methods to structure the application. Designed functionality for adding, viewing, updating, and managing employee records while practicing Java programming, data handling, and problem-solving concepts.

Hacker vs Firewall – Interactive Java Web Application | Java, Spring Boot, HTML, CSS, JavaScript

Developed an interactive web-based application using Java and Spring Boot based on a Hacker-versus-Firewall concept. Implemented backend controllers for game functionality, player management, scoring, and leaderboard operations. Designed the application to process player activities and maintain scores through REST-based backend functionality. Applied Java, Spring Boot, object-oriented programming, and web development concepts to create an interactive application.

INTERNSHIP & CERTIFICATIONS:

- Java Full Stack Developer Virtual Internship | 3 months | EduSkills (National Internship Portal)
- Google Android Developer | 3 months | EduSkills (National Internship Portal)
- SQL and Database Management Systems | 3 months | EduSkills (National Internship Portal)
- Google AI-ML Virtual Internship | 3 months | EduSkills (National Internship Portal)
- Certification Course in Full Stack Java Development | 6 months | Cad-Desk+
- Python Fullstack Developer | 3 months | EduSkills (National Internship Portal)

STRENGTHS:

- Active Listening & Communication
- Adaptability & Continuous Learning
- Time Management & Organization
- Problem-Solving & Analytical Thinking
- Team Collaboration
- Quick Learning & Willingness to Learn
